PROFESSIONAL SUMMARY

Python Full Stack Developer with 2.7+ years of experience building scalable web, mobile and Generative AI applications using Django REST Framework, FastAPI, React.js, Next.js and React Native. Integrates LLMs (Google Gemini, OpenAI) using prompt engineering and Pydantic-validated structured outputs for AI document analysis, OCR extraction and resume analysis. Experienced in secure REST APIs (JWT, RBAC, OAuth 2.0), asynchronous and event-driven processing (Celery, Redis, Apache Kafka), PostgreSQL optimization, Docker and microservices, delivering production applications in Agile/Scrum teams.

TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3

Backend: Django, Django REST Framework, FastAPI, REST APIs, Microservices, Celery, Apache Kafka, WebSockets

Frontend: React.js, Next.js, React Native, Tailwind CSS, Shadcn/UI, React Query, Redux Toolkit, Zustand, React Context API

Generative AI: Gemini API, OpenAI API, LLMs, Prompt Engineering, Structured Outputs (Pydantic), LangChain, RAG, Embeddings, ChromaDB (Vector database)

Databases: PostgreSQL, CockroachDB, MySQL, Redis, Database Design & Normalization, Indexing, Django ORM Query Optimization

Security: JWT Authentication, Role-Based Access Control (RBAC), OAuth 2.0, Session Management

Cloud & Tools: Docker, CI/CD, Google Cloud Platform (GCP), Firebase (FCM, Auth), Cloudinary, Git, GitHub, Postman

Practices: SDLC, Agile/Scrum, Performance Optimization, Debugging & Root Cause Analysis, Production Support, Code Review

PROFESSIONAL EXPERIENCE

Full Stack Software Engineer

Apr 2024 – Present

Gowdanar Technosoft Pvt Ltd (GTPL)

Bengaluru, Karnataka

- Built full-stack web and mobile applications using Python, Django REST Framework, FastAPI, React.js, Next.js and React Native.
- Designed and maintained 40+ REST APIs for authentication, onboarding, user management, document verification and workflow automation, following standardized API contracts.
- Developed Generative AI features with Google Gemini and OpenAI APIs (document analysis, OCR extraction, resume analysis, recommendations) using prompt engineering and Pydantic structured outputs.
- Implemented JWT authentication, RBAC, API-level permissions and Google/Apple OAuth 2.0 sign-in across multiple user roles and business workflows.
- Built asynchronous, event-driven processing with Celery, Redis and Kafka for long-running workflows, notifications and AI tasks.
- Improved application performance by 20–30% and reduced database load via PostgreSQL/CockroachDB indexing, ORM query optimization and Redis caching.
- Improved frontend rendering performance by ~60% on performance-sensitive interfaces by reducing unnecessary re-renders.
- Delivered real-time features with WebSockets and Django Channels, and push notifications through Firebase Cloud Messaging (FCM).
- Dockerized services, contributed to CI/CD pipelines and automated third-party API integrations, reducing manual effort.
- Supported production deployments, debugging, root-cause analysis and performance tuning for business-critical applications.

PROJECTS

MVBook — Multi-Tenant SaaS Business Management & Accounting Platform

Tech: React.js · Next.js · TypeScript · Tailwind CSS · Django REST Framework · FastAPI · PostgreSQL · CockroachDB · Redis · Celery · Apache Kafka · OpenAI API · Docker · GCP

- Built a multi-tenant SaaS platform for sales, purchase, inventory, reporting and financial workflows across client organizations.
- Secured REST APIs with JWT authentication, RBAC and tenant-aware access controls to enforce data isolation between organizations.
- Engineered a Kafka audit-logging pipeline with a transactional outbox and idempotent consumers for duplicate-free event delivery.
- Implemented a Django API Gateway with Redis caching, session management and rate limiting across accounting, inventory, reporting, OCR and notification services.
- Built an OpenAI-powered OCR pipeline extracting structured invoice and purchase-document data, reducing manual data entry.
- Improved API response times and dashboard performance through PostgreSQL and CockroachDB indexing, ORM query optimization and Redis caching; ran background jobs with Celery.
- Containerized backend services with Docker for consistent environments and independent service deployment, and deployed the platform on Google Cloud Platform (GCP).

AI Resume Analyzer & Career Assistant

Tech: Python · FastAPI · Google Gemini · OpenAI API · PostgreSQL · Celery · Redis · Next.js · JWT · Docker

- Built a FastAPI and Google Gemini platform that evaluates resumes against job descriptions, matching required and preferred skills, experience, keywords and education to resume evidence.
- Designed prompts and Pydantic response schemas so every analysis returns consistent, validated, application-ready JSON.
- Ran analyses as Celery/Redis tasks with status tracking, retries and failure handling; JWT-secured APIs with ownership checks.
- Built a Next.js dashboard showing resume scores, matched and missing requirements, strengths, weaknesses and learning resources.

EDUCATION

B.E. in Electronics & Communication Engineering — Basaveshwar Engineering College, Bagalkot

2018 – 2022
